ALADDIN PROJECT

SHERPA

WORKSHOP

12 APRIL 2019

European
Commission

Horizon 2020
European Union funding
for Research & Innovation

AGENDA

- Introduction
- Project description
- Pilot experiments
- Next Steps
- Conclusion

ALADDIN

**Advanced hoListic
Adverse Drone Detection
Identification & Neutralization**

➔ H2020 Programme

➔ Research and Innovation Action

European
Commission

Horizon 2020
European Union funding
for Research & Innovation

PROJECT ORIGIN

Where does it come from?

- ➔ Secure societies – Protecting freedom and security of Europe and its citizens
 - › Fight against Crime and Terrorism
 - › Detection and neutralization of rogue/suspicious light drone/UAV flying over restricted areas, and involving as beneficiaries, where appropriate, the operators of infrastructure

- ➔ Proposal selected in January 2017
- ➔ Grant Award in August 2017
- ➔ Start in September 2017
- ➔ Duration : 36 months – 3 years
- ➔ 2 Cycles / Iterations
 - › Beta version – 18 m – February 2019
 - › Final version – 36 m – August 2020
- ➔ Security – EU Restricted
 - › Nature of the topic: terrorism and organized crime activities
 - › Sensitiveness of some matters / deliverables
 - gap analysis, vulnerability assessment, neutralisation tools and development of new capabilities

European
Commission

Horizon 2020
European Union funding
for Research & Innovation

PROJECT DESCRIPTION

What is it about?

ACTION / PROJECT MAIN OBJECTIVES

- ➔ Study and develop a state-of-the-art, global, and extensible system to
 - › Detect, Localise, Classify, and Neutralize :
 - suspicious, and potentially multiple, light UAVs over restricted areas
- ➔ Build a Counter-UAV system
 - › Using BOREADES as the foundation
- ➔ Take into account Operational Constraints
 - › Ease of use and deployment,
 - › Quality of detection
 - › Safety
- ➔ Provide tools for operational support
 - › Investigations
 - › Training

OTHER OBJECTIVES

➔ Assess

- › Relevant technology
- › Threat trends
- › Regulations
- › Societal, Ethical and Legal (SoEL) frameworks

➔ Develop new knowledge for

- › LEAs,
- › Infrastructure designers, constructors, and operators

➔ Develop innovative Curricula

- › E-learning
- › On site training

European
Commission

Horizon 2020
European Union funding
for Research & Innovation

CONSORTIUM

Who is involved

CONSORTIUM – 18 PARTNERS

- ➔ 3 Industrial leading companies
 - › Diginext (DXT), CS, IDS
- ➔ 3 Innovative SMEs
 - › SIRC, MC2, HGH
- ➔ 3 European Technical Research Centres
 - › CERTH, Fraunhofer IDMT, PIAP
- ➔ 1 European Aeronautic Expert Centre
 - › FADA CATEC
- ➔ 1 European Research Centre and Academic Institute
 - › VUB
- ➔ 1 World-class Infrastructure company
 - › Acciona Construcion
- ➔ 6 LEAs (End Users) : KEMEA, CAST/DSTL, MIF, PJ, MIPS, ADM

CONSORTIUM – EUROPEAN DIMENSION

European
Commission

Horizon 2020
European Union funding
for Research & Innovation

IMPLEMENTATION

How is it implemented

SOME FIGURES AND CONSTRAINTS

➔ 9 Work Packages

➔ 37 Tasks

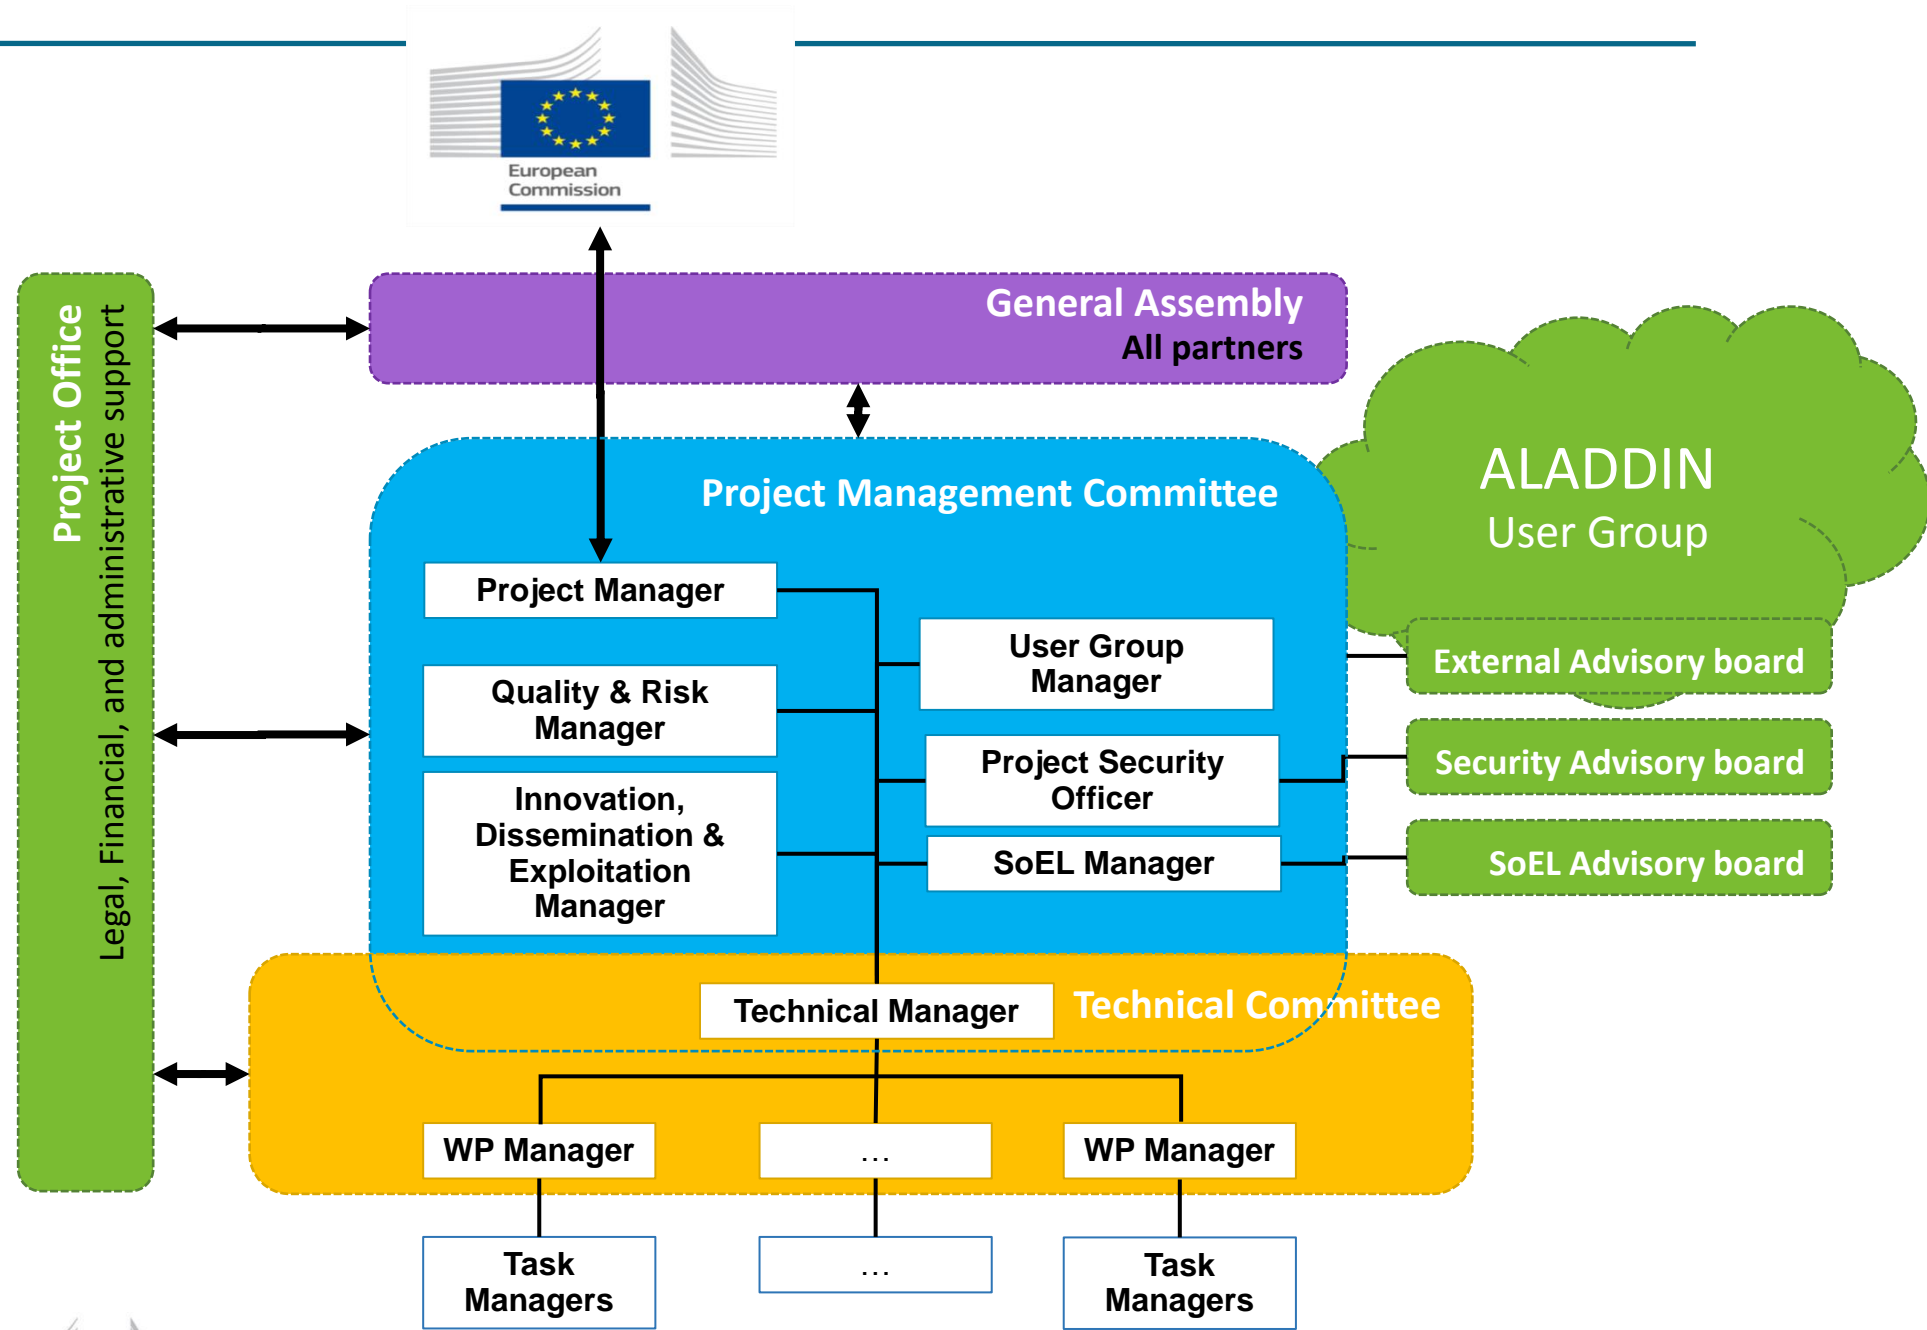

➔ 2 Cycles / Iterations

➔ 6 Milestones

➔ 99 Deliverables

- 12 EU Restricted => 21
- 66 Confidential => 59
 - 21 to be reviewed by SAB - security perspective
- 19 Public => 19

MANAGEMENT STRUCTURE

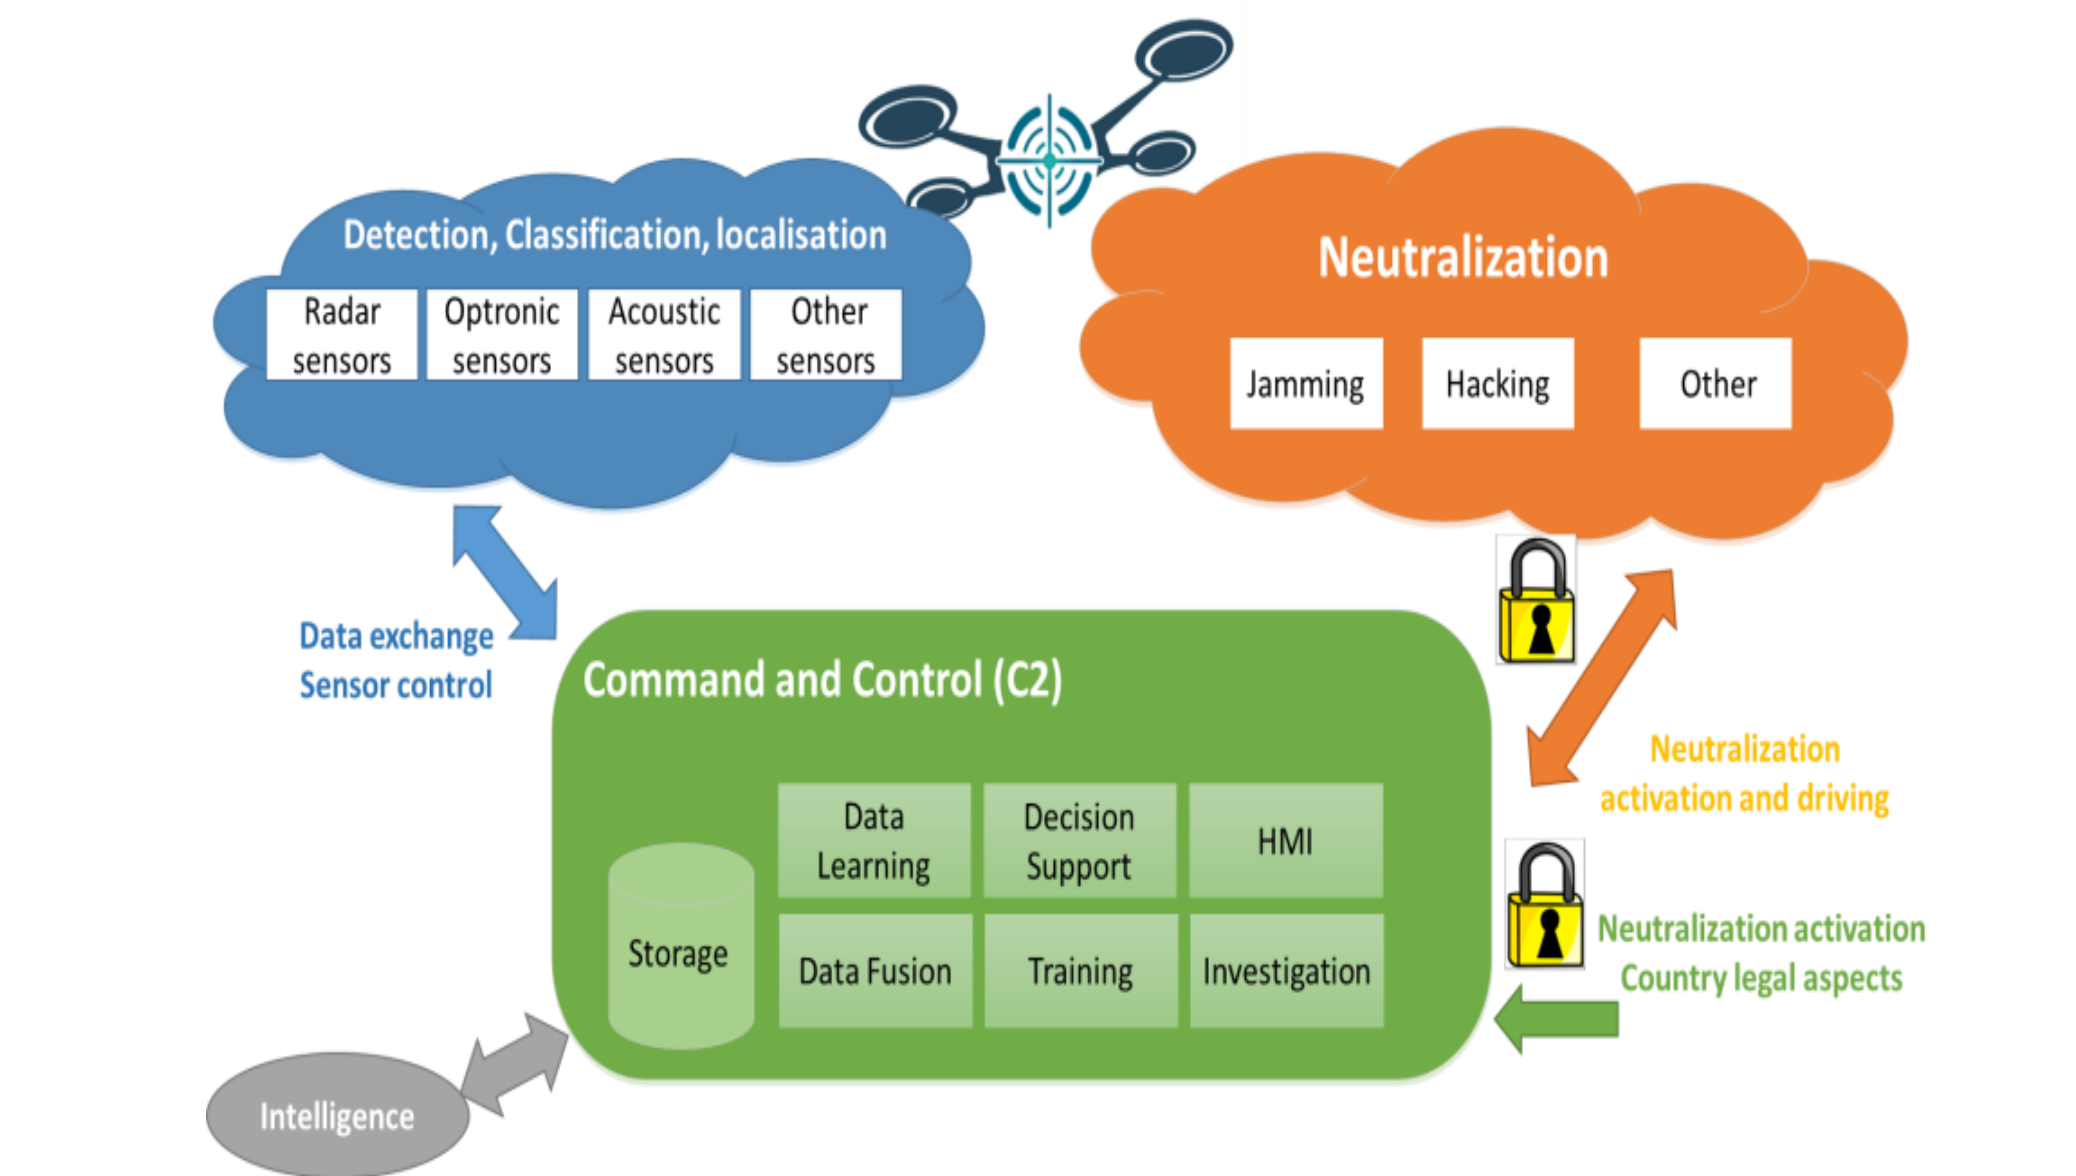

European
Commission

Horizon 2020
European Union funding
for Research & Innovation

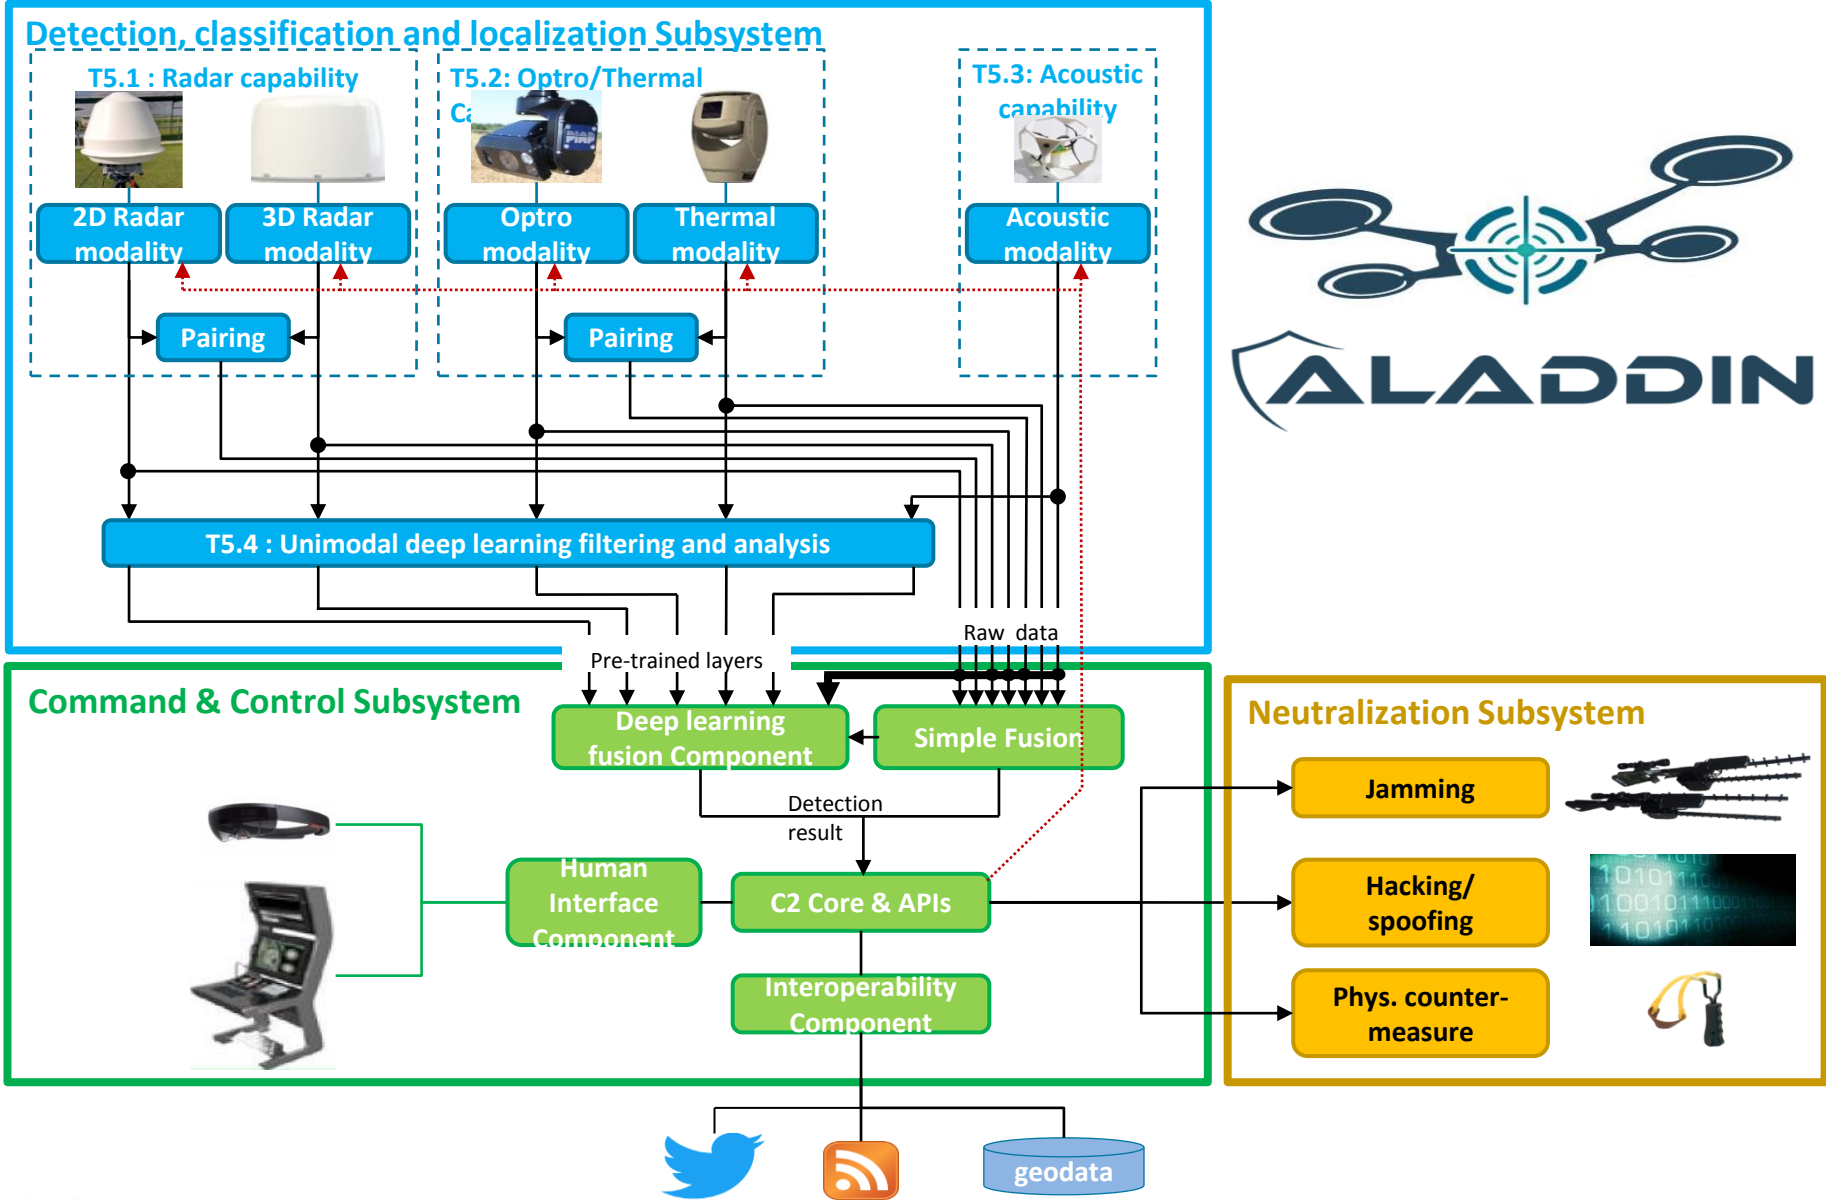

ARCHITECTURE

What is the system about?

PLATFORM / SYSTEM CONCEPT

NOTIONAL ARCHITECTURE

European
Commission

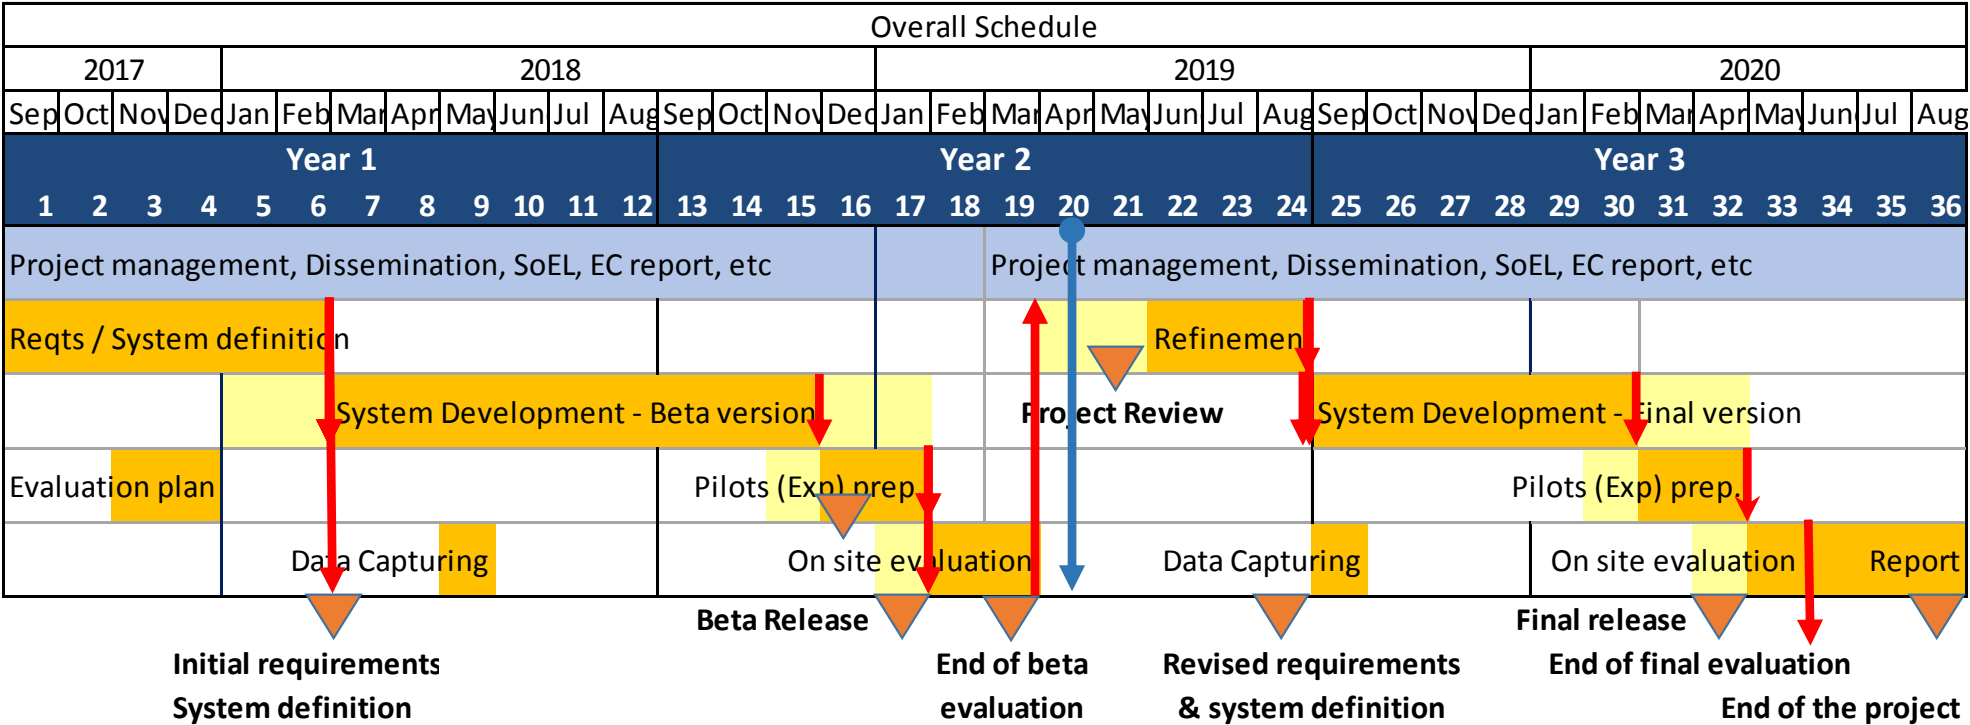

Horizon 2020
European Union funding
for Research & Innovation

PROGRESS

Where are we?

SCHEDULE – PROGRESS

➔ Where we stand

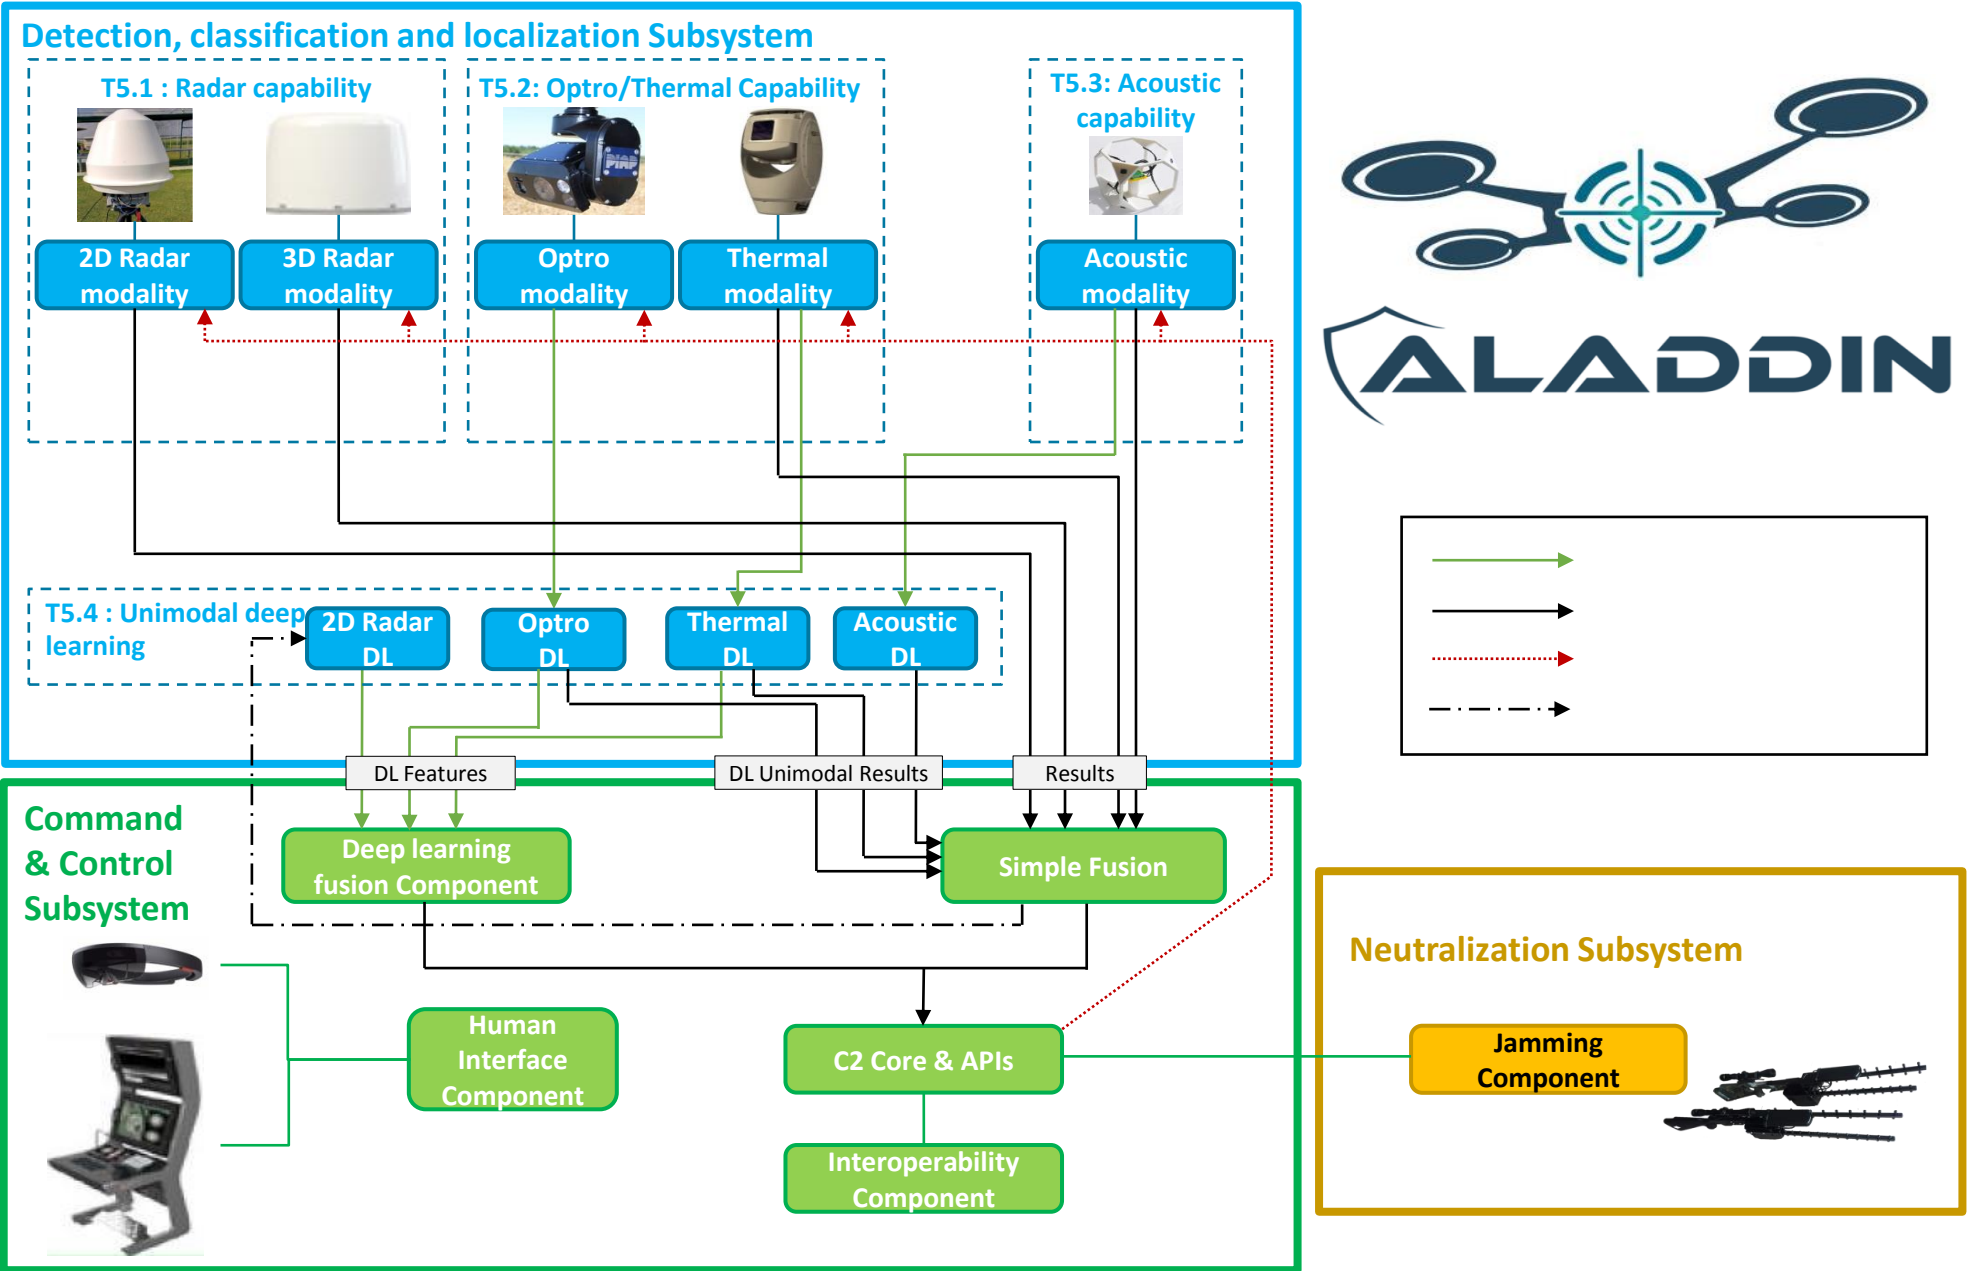

European
Commission

Horizon 2020
European Union funding
for Research & Innovation

BETA VERSION

Which system under evaluation?

European
Commission

Horizon 2020
European Union funding
for Research & Innovation

PILOT EXPERIMENTS

How to evaluate the system?

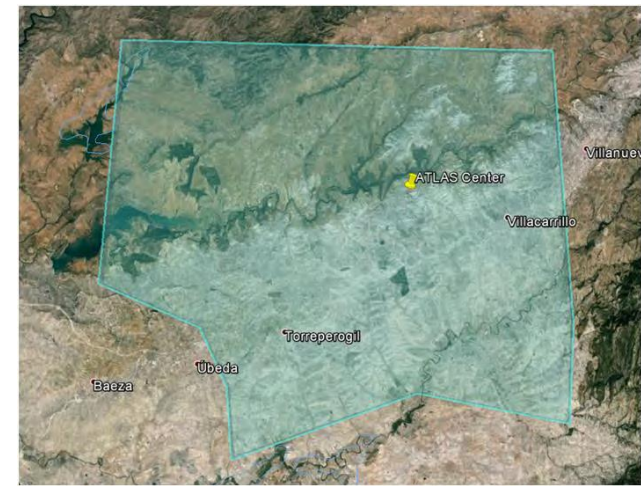

ATLAS Experimental Test Center

- **Location**
 - Flight test center for drones: www.atlascenter.aero
 - TSA: Temporary Segregated Airspace (30x35km up to 5.000ft AMSL)
 - Be able to perform BVLOS flights under current Spanish regulation
 - Hangars for drone and equipment logistics
 - Offices for workshops, meetings, etc.

ATLAS Experimental Test Center

- Possibility to perform high risk operations with drones due to the activation of the TSA
- Permits for flights at night conditions without lights under exception article of Spanish regulation (article 43)
 - Alignment with future European regulations → definition of a standard scenario based on SORA risk assessment

SCENARIO DEMONSTRATIONS

2019 ALADDIN Demonstration experiments

- Beta version of ALADDIN system

Integration week	
JANUARY 2019	
Monday 21 st	Installation & start of tests
Tuesday 22 nd	Integration tests
Wednesday 23 rd	Integration tests
Thursday 24 th	Integration tests
Friday 25 th	Integration tests

Experiments & Training week	
FEBRUARY 2019	
Monday 4 th	Set up and continuation of integration
Tuesday 5 th	LEA training - Experiments
Wednesday 6 th	LEA training DEMO DAY preparation
Thursday 7 th	DEMO DAY
Friday 8 th	Evaluation of ALADDIN Collecting equipment

Pilot scenarios

- **Main situations identified in ALADDIN project**
 - Potential UAV actions
 - Malicious intentions
 - Negligent UAV
 - Accidental situation
 - Discussed scenarios:
 - Secured facility: prisons, nuclear plants, dams, other critical infrastructures.
 - Airports
 - Governmental buildings
 - Temporary public events: concerts, sports events, agricultural shows, VIP speaking event
 - Environments:
 - Rural
 - Urban

SCENARIO DEMONSTRATIONS

Pilot scenarios

- **Evaluation framework**
 - Three main threat scenarios considered:
 - A drone invades the protected area.
 - A drone is flying in the protected area at different conditions (heights, distances, etc.)
 - A swarm of drones is flying in the protected area
 - Night flights

SCENARIO DEMONSTRATIONS

Drones

- Two types of drones used as intruder drones
 - Multicopter: different sizes available

Drone	Quantity	Weight (kg)	Size (cm)	Detection
DJI Phantom 3	6	1,3	35	Yes
DJI Phantom 4	1	1,4	35	Yes
DJI Matrice 600	1	15	170	Yes

SCENARIO DEMONSTRATIONS

Drones

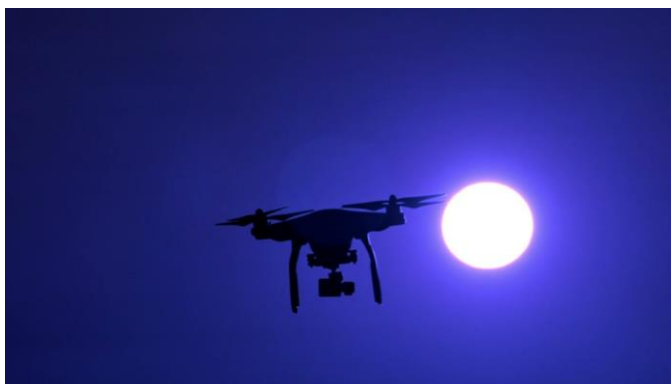

- Two types of drones used as intruder drones
 - Fixed wing:

Drone	Quantity	Weight (kg)	Span (cm)	Detection
Parrot Disco	7-8	0,75	115	Yes

Testing on different weather conditions

- Different weather / light conditions have tested during integration phase
 - Foggy conditions
 - Difficulty for detection with the thermal infrared, and also camera tracking
 - Flight at night
 - Intruder drone without lights to give more representativeness
 - Impossible to detect in very dark conditions as in ATLAS with cameras. No effect on radar – good detections.
- Other circumstances which may affect:
 - Temperature, cloudy / clean sky, backlighting effect due to sun position,
 - Trajectories followed by the intruder drone, velocities, etc.

European
Commission

Horizon 2020
European Union funding
for Research & Innovation

NEXT STEPS

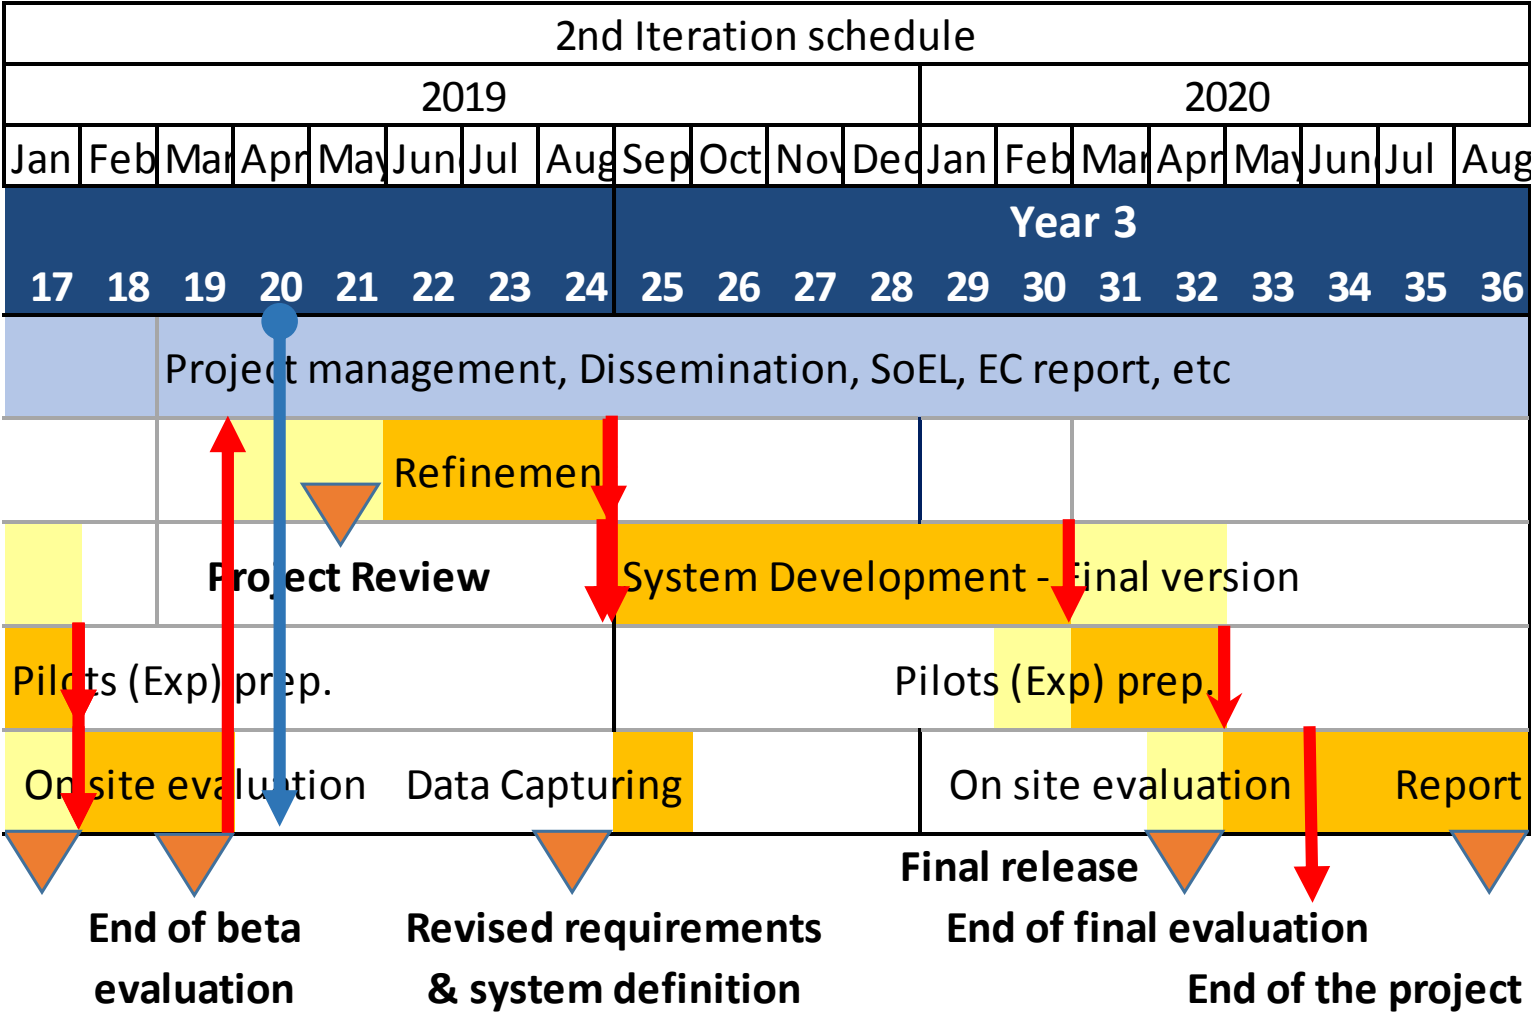

What's next?

END OF REPORTING PERIOD

- ➔ Preparation & submission (April) of Periodic Report (18 month)
- ➔ Evaluation by European Commission
 - › Review with REA and experts - 16 May
- ➔ Start of second iteration (March 2019) => Final version (June 2020)
 - › Workshop June/July
 - Review requirements, ConOps, Use Cases
 - Review architecture and functional specifications
 - Roadmap for Neutralisation means
 - › Data capturing session – mid-Sept in Greece
 - › Development of components, Curriculum
 - › Integration, test and evaluation + Training
 - May 2020 in Greece
 - › Final Report - Aug 2020

SCHEDULE – PROGRESS

➔ The plan till the end

European
Commission

Horizon 2020
European Union funding
for Research & Innovation

CONCLUSION

ALADDIN - CONCLUSION

- ➔ European H2020 Project
- ➔ 3 year duration – Sept 2017 => Aug 2020
- ➔ Developing a Counter UAV
 - › Building on BOREADES system
 - › Sensor suite with acoustic capability and deep learning filtering
 - › Innovative neutralisation capability
- ➔ Experiments in real environments
 - › Open field - Urban area
- ➔ Enhance Security and provide tools for LEAs & Infrastructure Constructors and Operators
- ➔ Open to external users, experts, advisors
